## S1: The procedure of the extraction and isolation of the bark of $P$. amabilis

 The combined extracts were evaporated to 1 L , filtrated and applied to a resin HP20 column, eluting with $\mathrm{H}_{2} \mathrm{O}, 10 \% \mathrm{EtOH}, 30 \% \mathrm{EtOH}, 50 \% \mathrm{EtOH}, 70 \% \mathrm{EtOH}$ and $95 \% \mathrm{EtOH}$ to give six fractions (Fr. 1 - Fr.6). Fr. 1 was subjected to column chromatography (CC) on MCI gel, eluting with gradient solvent system ( $\mathrm{MeOH}-\mathrm{H}_{2} \mathrm{O}, 0: 100-40: 60$ ) to yield five fractions (Fr.1-1 - Fr.1-5). Fr.1-2 was separated over HW-40 gel using $\mathrm{H}_{2} \mathrm{O}$ as eluent to obtain eight fractions (Fr.1-2-1 - Fr.1-2-5). Fr.1-2-2 was purified by HW-40 gel repeatedly to afford 4 (8 $\mathrm{mg})$. Fr.1-2-3 was subjected to MCI column eluting with $5 \% \mathrm{MeOH}$ to yield five fractions (Fr.1-2-3-1 - Fr.1-2-3-5) and Fr.1-2-3-4 was purified by HW-40 gel repeatedly to afford 5 ( 12 mg ). Fr.1-2-4 was subjected to ODS column eluting with $0 \%-10 \% \mathrm{MeOH}$ to yield three fractions (Fr.1-2-4-1 - Fr.1-2-4-3). Fr.1-2-4-3 was purified by HW-40 gel to afford 6 ( 14 mg ). Fr.1-3 and Fr.1-4 were combined and re-subjected to MCI column eluting with 10 \% MeOH to yield six fractions (Fr.1-3-1 - Fr.1-3-6). Fr.1-3-2 and Fr.1-3-3 was purified by HW-40 gel eluting with $5 \% \mathrm{MeOH}$ to afford $7(8 \mathrm{mg})$ and $\mathbf{8}(36 \mathrm{mg})$, respectively. Fr.1-3-4 was purified by ODS gel eluting with $10 \% \mathrm{MeOH}$ to afford $9(40 \mathrm{mg})$ and $\mathbf{1 0}(6 \mathrm{mg})$. Fr. 2 was subject to MCI column eluting with $10 \%-20 \% \mathrm{MeOH}$ to yield eight fractions (Fr.2-1 -Fr.2-8). Fr.2-8 was purified by HW-40 gel eluting with $10 \% \mathrm{MeOH}$ to obtain five subfractions (Fr.2-8-1 - Fr.2-8-5). Fr.2-8-4 was purified by ODS gel eluting with $30 \%-60 \%$ MeOH and $\mathrm{HW}-40$ gel to afford $\mathbf{1}(14 \mathrm{mg}), \mathbf{2}(22 \mathrm{mg})$, and $\mathbf{3}(12 \mathrm{mg})$.
