## Extraction and Isolation of the Air-dried Rhizomes of Curcuma elata

The air-dried rhizomes of C. elata ( 8.5 kg ) were milled and macerated successively with $n$-hexane and EtOH . The hexane and EtOH solutions were filtered and concentrated to dryness under reduced pressure at temperature $40-45^{\circ} \mathrm{C}$ to give the hexane extract (brownish syrup, 129.7 g ) and the EtOH extract (dark brownish sticky solid, 281.5 g ).

## Hexane Extract

The hexane extract ( 129.0 g ) was fractionated by column chromatography (CC) (Merck silica gel $60,0.063-0.200 \mathrm{~mm}, 250 \mathrm{~g}$ ) eluting with $n$-hexane, $n$-hexane-EtOAc, and EtOAc with increasing amount of the more polar solvent. The eluates were examined by TLC and 8 groups of eluting fractions were obtained.

Group 3 (Fractions 5-17): These combined fractions were chromatographed over silica gel and eluted under isocratic condition ( $1 \% \mathrm{EtOAc}$ in $n$-hexane) to afford germacrone ( $\mathbf{1}$ ) as colorless prisms ( 575.9 mg ), m.p. $49-50^{\circ} \mathrm{C}$ (from MeOH ) and curzerenone (2) as a colorless oil ( 475.6 mg ).

Group 4 (Fractions 18-40): These combined fractions were chromatographed over silica gel and eluted under isocratic condition ( $2 \% \mathrm{EtOAc}$ in $n$-hexane) to afford 3 subfractions. Subfraction 1 (fractions 1-31) was separated on a Sephadex LH-20 eluting with MeOH and further purified by silica column chromatography eluting with $0.6 \%$ EtOAc in $n$-hexane to yield isofuranodienone (3) as a colorless oil ( 3.2 mg ). Subfraction 3 (fractions 40-51) was subjected to repeated column chromatography eluting under isocratic condition ( $1 \%$ EtOAc in $n$-hexane) to give furanodienone (4) as a colorless oil ( 44.3 mg ).

Group 5 (Fractions 41-57): These combined fractions were chromatographed over silica gel using $2 \%$ EtOAc in $n$-hexane as eluent, followed by column chromatography eluting under isocratic condition ( $1 \% \mathrm{EtOAc}$ in $n$-hexane) to give curdione (5) as colorless prisms ( 129.9 mg ), m.p. $55-56^{\circ} \mathrm{C}$ (from EtOAc- $n$-hexane) and neocurdione (6) as a colorless prisms ( 385.8 mg ), m.p. $41-42^{\circ} \mathrm{C}$ (from EtOAc- $n$-hexane).

Group 7 (Fraction 60): This fraction was repeatedly recrystallized with EtOAc in $n$ hexane to afford zederone (7) as colorless needles ( 11.85 g ), m.p. $153-154{ }^{\circ} \mathrm{C}$ (from EtOAc-nhexane).

Group 8 (Fractions 61-62): These combined fractions were chromatographed over silica gel and eluted under isocratic condition ( $5 \% \mathrm{EtOAc}$ in $n$-hexane) to afford 6 subfractions. Subfraction 3 (fractions 5-6) was rechromatographed over silica gel eluting with $\mathrm{CH}_{2} \mathrm{Cl}_{2}$ to give curcumenone (8) as colorless oil ( 144.3 mg ). Subfraction 5 (fractions 11-13) was subjected to two repeated column chromatography eluting under isocratic condition ( $15 \% \mathrm{EtOAc}$ in $n$-hexane) to yield 13-hydroxygermacrone (9) as colorless oil ( 45.8 mg ).

## EtOH Extract

The EtOH extract ( 270.0 g ) was fractionated by column chromatography (Merck silica gel $60,0.063-0.200 \mathrm{~mm}, 520 \mathrm{~g}$ ), using a gradient solvent system of $n$-hexane, $n$-hexane-EtOAc, $\mathrm{EtOAc}, \mathrm{EtOAc}-\mathrm{MeOH}$ and MeOH with increasing amounts of the more polar solvent. The eluates were examined by TLC and 3 combined fractions were obtained.

Group 2 (Fractions 40-58): These combined fractions were chromatographed over silica gel and eluted under isocratic condition $\left(0.5 \% \mathrm{MeOH}\right.$ in $\left.\mathrm{CH}_{2} \mathrm{Cl}_{2}\right)$ to afford 4 subfractions. Subfraction 2 (fractions 13-17) was separated on Sephadex LH-20 eluting with MeOH and further purified by column chromatography over silica gel RP-18 with $30 \% \mathrm{MeOH}$ in $\mathrm{H}_{2} \mathrm{O}$ as eluting solvent to give 3-hydroxy-5-platyphyllone (11) as colorless viscous oil ( 2.7 mg ), ( $3 S$ )-1,7-bis(4-hydroxyphenyl)-(6E)-6-hepten-3-ol (12) as amorphous powder (20.2 mg), m.p. 112-113 ${ }^{\circ}$ (EtOAc-n-hexane) and centrolobol (13) as amorphous solid ( 7.5 mg ). Subfraction 3 (fractions 18-23) was separated on Sephadex LH-20 eluting with MeOH , followed by column chromatography over silica gel RP-18 with $30 \% \mathrm{MeOH}$ in $\mathrm{H}_{2} \mathrm{O}$ to yield (3S)-1-(3,4-dihydroxyphenyl)-7-(4-hydroxyphenyl)-( $6 E$ )-6-hepten-3-ol (14) as amorphous solid ( 2.1 mg ).

Group 3 (Fractions 59-60): These combined fractions were chromatographed on a Sephadex LH-20 and eluted with MeOH and further purified by chromatography over silica gel

RP-18 with $30 \% \mathrm{MeOH}$ in $\mathrm{H}_{2} \mathrm{O}$ to give zedoarondiol (10) as colorless needles ( 7.5 mg ), m.p. 123 ${ }^{\circ} \mathrm{C}$ (from EtOAc- $n$-hexane).

## Preparation of the MTPA Ester of Compounds 11 and 12.

To a solution of the compound $\mathbf{1 1}(2.1 \mathrm{mg})$ in dry pyridine ( $100 \mu \mathrm{~L}$ ) was added $(R)$ -$(-)$-MTPA chloride $(15 \mu \mathrm{~L})$ at $10^{\circ} \mathrm{C}$ and the mixture was stirred for 5 min . Stirring continued at ambient temperature and the completion of reaction was monitored by TLC. Two milliliters of $n$-hexane was added to the reaction mixture and the hexane-soluble part was subjected to flash column chromatography using $n$-hexane and $15 \% \mathrm{EtOAc} / n$-hexane as eluting solvent to give the ( $S$ )-MTPA ester $\mathbf{1 1 x}(3.2 \mathrm{mg})$. The procedure was repeated, but using ( $S$ )-(+)-MTPA chloride in place of $(R)-(-)$-MTPA chloride, to yield the $(R)$-MTPA ester $\mathbf{1 1 y}(3.5 \mathrm{mg})$. The ${ }^{1} \mathrm{H}$ NMR spectra of $\mathbf{1 1 x}$ and $\mathbf{1 1} \mathbf{y}$ were recorded in $\mathrm{CDCl}_{3}$; the chemical shift differences of the proton resonances between the $(S)$-MTPA ester 11x and the $(R)$-MTPA ester 11y were calculated and the results are summarized in S29. Following the above procedure, the absolute configurations of esters $\mathbf{1 2 x}$ and $\mathbf{1 2 y}$ were determined, and the results are summarized in $\mathbf{S 3 0}$.

S1. ${ }^{1} \mathrm{H}$-NMR spectrum of germacrone (1) in $\mathrm{CDCl}_{3}$
Germacrone (1): ${ }^{1} \mathrm{H}-\mathrm{NMR}\left(\mathrm{CDCl}_{3}, 400 \mathrm{MHz}\right), \delta: 4.95(1 \mathrm{H}, \mathrm{br} \mathrm{d}, J=11.6 \mathrm{~Hz}, \mathrm{H}-1), 2.05(1 \mathrm{H}$, $\mathrm{m}, \mathrm{H}-2 \alpha), 2.35(1 \mathrm{H}, \mathrm{m}, \mathrm{H}-2 \beta), 2.06(1 \mathrm{H}, \mathrm{m}, \mathrm{H}-3 \alpha), 2.13(1 \mathrm{H}, \mathrm{m}, \mathrm{H}-3 \beta), 4.68(1 \mathrm{H}, \mathrm{br} \mathrm{d}, J=$ $9.0 \mathrm{~Hz}, \mathrm{H}-5), 2.82(1 \mathrm{H}, \mathrm{br} \mathrm{d}, J=12.5 \mathrm{~Hz}, \mathrm{H}-6 \alpha), 2.91(1 \mathrm{H}, \mathrm{br} \mathrm{d}, J=12.5 \mathrm{~Hz}, \mathrm{H}-6 \beta), 2.92$ $(1 \mathrm{H}, \mathrm{d}, J=10.0 \mathrm{~Hz}, \mathrm{H}-9 \alpha), 3.38(1 \mathrm{H}, \mathrm{d}, J=10.0 \mathrm{~Hz}, \mathrm{H}-9 \beta), 1.77(3 \mathrm{H}, \mathrm{s}, \mathrm{H}-12), 1.69(3 \mathrm{H}, \mathrm{s}$, $\mathrm{H}-13), 1.41(3 \mathrm{H}, \mathrm{s}, \mathrm{H}-14), 1.60(3 \mathrm{H}, \mathrm{s}, \mathrm{H}-15)$.

S2. ${ }^{13} \mathrm{C}-\mathrm{NMR}$ spectrum of germacrone (1) in $\mathrm{CDCl}_{3}$
Germacrone (1): ${ }^{13} \mathrm{C}-\mathrm{NMR}\left(\mathrm{CDCl}_{3}, 100 \mathrm{MHz}\right), \delta: 134.8(\mathrm{C}-1), 24.0(\mathrm{C}-2), 38.0(\mathrm{C}-3), 134.8$ (C-4), 125.3 (C-5), 29.1 (C-6), 129.3 (C-7), 207.6 (C-8), 55.8 (C-9), 126.6 (C-10), 137.2 (C11), 19.8 (C-12), 22.2 (C-13), 15.5 (C-14), 16.6 (C-15).

S3. ${ }^{1} \mathrm{H}$-NMR spectrum of curzerenone (2) in $\mathrm{CDCl}_{3}$
Curzerenone (2): ${ }^{1} \mathrm{H}-\mathrm{NMR}\left(\mathrm{CDCl}_{3}, 400 \mathrm{MHz}\right), \delta: 5.78(1 \mathrm{H}, \mathrm{dd}, J=17.4,13.0 \mathrm{~Hz}, \mathrm{H}-1), 4.98$ ( $2 \mathrm{H}, \mathrm{dd}, J=17.4,4.3 \mathrm{~Hz}, \mathrm{H}-2$ ), $4.73(1 \mathrm{H}, \mathrm{br} \mathrm{s}, \mathrm{H}-3 \alpha), 4.98(1 \mathrm{H}, \mathrm{br} \mathrm{s}, \mathrm{H}-3 \beta), 2.99(1 \mathrm{H}, \mathrm{s}, \mathrm{H}-$ 5), $2.76(1 \mathrm{H}, \mathrm{d}, J=17.5 \mathrm{~Hz}, \mathrm{H}-9 \alpha), 2.88(1 \mathrm{H}, \mathrm{d}, J=17.5 \mathrm{~Hz}, \mathrm{H}-9 \beta), 7.06(3 \mathrm{H}, \mathrm{br} \mathrm{s}, \mathrm{H}-12)$, 2.15 ( $3 \mathrm{H}, \mathrm{s}, \mathrm{H}-13$ ), 1.81 ( $3 \mathrm{H}, \mathrm{s}, \mathrm{H}-14$ ), 1.16 ( $3 \mathrm{H}, \mathrm{s}, \mathrm{H}-15$ ).

S4. ${ }^{13} \mathrm{C}$-NMR spectrum of curzerenone (2) in $\mathrm{CDCl}_{3}$
Curzerenone (2): ${ }^{13} \mathrm{C}-\mathrm{NMR}\left(\mathrm{CDCl}_{3}, 100 \mathrm{MHz}\right), \delta: 145.5$ (C-1), 112.9 (C-2), 115.5 (C-3), 141.0 (C-4), 64.5 (C-5), 194.7 (C-6), 119.2 (C-7), 165.4 (C-8), 33.6 (C-9), 42.8 (C-10), 120.1 (C-11), 139.5 (C-12), 8.9 (C-13), 24.7 (C-14), 24.7 (C-15).
